## Part one of an Excel tutorial using the the Alberta "Sunshine List" Data

Given that most of you are on Macs, your Excel interfaces will be different from mine. Still, the tutorial and screenshots will give you a good enough idea how to proceed. If you're stuck and unable to find what you're looking for, use Excel's "Help" menu.

- 1) Alberta's release of public-sector salaries of employees earning more than \$100,000 lead to stories like <u>this one</u> on the CBC.
- 2) Go to the Public Disclosure of Salary and Severance website
- 3) Scroll to the bottom to the "Alberta Open Data Portal" option

Image: Constraint of the state of									
Aboriginal Relations	Davey,Eric	Consultation Manager	Manager	2013	\$102,739.78	\$0.00	\$27,134.64	\$0.00	
Aboriginal Relations	Crossen,Peter	Director FNDF	Senior Manager	2013	\$125,626.08	\$0.00	\$32,052.32	\$0.00	
Aboriginal Relations	Coxson,Kathryn M	Mgr Negotiation Support	Manager	2013	\$102,378.93	\$0.00	\$26,623.70	\$0.00	
Relations	Buchanan, Clay	ADM FNMR	2	2013	\$168,989.36	\$0.00	\$46,269.57	50.00	

This data is also available in a number of open formats on the Alberta Open Data Portal

- 4) Download the csv (Comma Separate Value) file.
- 5) Save the file in a folder you've created for this exercise.
- 6) Save the file as an Excel file.
- 7) Paste the sunshine list's URL into the first available cell in the spreadsheet's first row, in this case, I1

Conr	nections		Sort & Filter		[	Data Tools	
🖁 http://data.a	lberta.ca/d	ata/public-	disclosure-salary-a	nd-severar	nce		
D	E	F	G	Н	I	71	
	BaseSalary	CashBenef	NonCashBenefits	Severance	http://data	a.alberta	.ca/d

original Relations	2013 I
original Relations	2013
Original WorkingCopy	et3 📜

- 11)
- 12) Delete the URL from I1, since we already have it in the table's original version.
- 13) Reformat the numbers in columns E,F,G and H as currency, with no decimal points.

D	U		U	,		C	Г	0	п	I

	istom		-\$1,23	4					0	
									0	
									0	
									0	
		-						-	0	
			L						0	

15) Before we proceed further, apply the filter and use the dropdown menus for each column to get to know the data.

14)

- 16) Sort the columns with the currency in descending order to get a rough idea of who's making what.
- 17) You'll notice that the version of the salaries database available for download, is missing the employee names. Annoying, to be sure! When publicly available data is missing crucial information, don't be afraid to ask for a version that contains the data you want. Given that we're stuck with what we've got, let's keep going. Performing basic calculations and eventually creating a pivot table with this data will allow us to see patterns that, at the very least, could lead to interesting questions or story ideas.

- 18) Since benefits are part of a person's earnings, let's combine the values in BaseSalary, CashBenefits and NonCashBenefits columns.
- 19) Insert a new column to the left of the Severance column, call it "TotalSalary", and add the values from the three columns identified in the previous step.

	•		1					
nections	All - 📟 Eait Links		Advanc	cea   Column	is Du	plicates Validation 🕤	Analysis 🕤	Ŧ
	Connections	Sort 8	ι Filter			Data Tools		
<i>f</i> <sub>x</sub> =E2	2+F2+G2							
	[	)	E	F		G	Н	
	PositionClass		BaseSalary	CashBene	fits	NonCashBenefits	Total Salary	Sever
	Senior Manage	r	\$122,420	(	<b>\$0</b>	\$30 <mark>,</mark> 849	=E2+F2+G2	
	Manager		\$101,668		<b>\$</b> 0	\$25,849		
loc	Executive Man	agor 2	¢150.064		¢0	\$12.010		

20) (Note: For more on calculations, please consult Digging Deeper's Appendix A, beginning on page 281.) Before hitting the "Enter" key, make sure your formula resembles the one in the formula bar ( which you should be sure to activate) in the

- 21) Copy the formula to the bottom. Make sure that Excel performs the calculations on all the fields in the column by double-clicking on the bottom right corner of the cell, or scrolling to the bottom. If it stops mid-way, drag or double-click on the cell handle on the cell where the copying stopped.
- 22) Sorting the new salary column in descending order will produce a different result for the highest income earner than the sorting of the BaseSalary column produced. This is because of the cash and on-cash benefits.

23) Wouldn't it be interesting to see what percentage of the base salary and these benefits constitute. To do this, let's create a new field to the left of the Total Salary field.

	→			+			ء 13=
ct to Re Jimns Du	emove Data Co plicates Validation *	onsolidate	What-If Analysis *	Group	Ungroup ,	Subtot	al
	Data Tools				Outline		5
:	G		H		I.		_
enefits	NonCashBenefits	Total B	enefits	Tota	l Salary		Sever
\$0	\$30,849		_	/	\$153	3,269	
\$0	\$25,849				\$127	7,517	
\$0	\$42,010				\$200	),874

			A400.077	60.040	60.5 0.5 f		6400 CO4	

25) Hit enter, and copy the formula to the bottom.

- 26) We can also sort this column in descending order to see who earned the most generous benefits. Of course, to find out the identity of the individual, you'll have to plug the information into the Sunshine List's search engine. An extra and time-consuming step that probably explains why the Alberta government excluded the names from the downloadable csv file.
- 27) Next, let's figure out whose benefits package constituted the largest percentage of the base salary, a detail that could lead to an interesting story about benefits, or at least some intelligent questions.

- 28) To do this, create a new column to the left of Total Benefits, and call it ``Benefit Percent of Base Salary``
- 29) The calculation to obtain the percentage is a simple division (page 285 of Digging Deeper)

	Conn	ections All	· · · · ·	LUIT LITINS		Auvanceu	Columns Du	plicates Validation *	A	nalysis 🐣		Ŧ

	\$22,3	70 \$30,004	\$4,417	\$34,4	20		153.9%	\$56,790	\$109,391
	\$136.8	50 \$158 932	\$43 136	\$202.0	68		147 7%	\$338 918	\$440 777

32)

33) Filter out the error signs, which are indicating that Excel

cannot perform math on cell references that are missing values.

34) Once you've applied the filter, de-select the error from your

drop-down menu ( NOTE: DON`T DELETE THESE ROWS. THERE IS NO NEED TO DELETE IN EXCEL. WE SIMPLY FILTER OUT THE VALUES WE DON`T WANT)

$f_x$	f Benefit Percent of Base Salary											
	Н		1			1			K			
-	Total Benefits	•	Benefit Percent of Ba	se Salary	Ψ,	Tota	l Salary	•	Severan 💌			
14	\$53,33	31		721.	6%		\$60,7	/21	\$335,630			
12	\$59,84	43		<del>193.</del>	2%		\$90,8	317	\$103,088			
18	\$47,64	42		165.	2%		\$76,4	88	\$81,460			

35)

36) We can also determine the averages of the columns that

contain the money values.

37) Let's first clear the filter, and then lose it by clicking on the filter icon.

38)

39) Let's place the average calculation at the bottom of the table. Before scrolling, let's "freeze" the first row, so the labels stay visible while we're heading downwards.

41) Create an "Average" row, but be sure to separate it from the table. That way it doesn't get sorted accidently.

_		A6387 🔹 🔍 🖈 🖌 🖌 Aver	age					
		A	В	С	D	E	F	
	1	Ministry	Year	PositionTitle	PositionClass	BaseSalary	CashBenefits	No
5	384	Justice and Solicitor General	2012	Medical Examiner	Executive Manager 1	\$353,744	\$0	
5	385	Justice and Solicitor General	2013	Legal Counsel	Senior Manager	\$188,655	\$0	
-	386							
(5	387	Average						
5	388							
5	220							

## 42)

Begin the calculation in column E6387.

ws Screen		aunys	S	election	Window All Panes - 🗔 Unhide 🕀 Re				
Show		Zoom			Win				
$X \checkmark f_x$	=average(E2:E6385)								
С			D		E	F	G		
		Position	Class		BaseSalary	CashBenefits	NonCashBe		
er		Executive Manager 1			\$353,744	\$0	\$		
		Senior N	lanager		\$188,655	\$0	\$		
				(	=average(E	2:E6385)			

creen								
	Show		Zoom					
$f_x$	=AVERAGE(E2:E6	385)						
С			D	E	F			
		Position	Class	BaseSalary	CashBenefits	NonCa		
		Executiv	e Manager 1	\$353,744	\$0			
		Senior N	lanager	\$188,655	\$0			
				\$122,699				

43)

44) So the average base salary is \$122,699. A handy reference when comparing higher pay cheques. Copy the formula in columns F,G,H and the rest of the columns to get their averages. You do this by placing the cursor over thick black box at the bottom right of the cell in the screen shot above and dragging it to your right.

•	-									
	Show		Zoom		Window					
f:	: =AVERAGE(E2:E6385)									
	E	F	G	Н	l.	J	K			
	BaseSalary	CashBenefits	NonCashBenefits	Total Benefits	Benefit Percent of Base Salary	Total Salary	Severance			
	\$353,744	\$0	\$4,908	\$4,908	1.4%	\$358,652	\$0			
	\$188,655	\$0	\$2,127	\$2,127	1.1%	\$190,782	\$0			
	\$122,699	\$2,454	\$29,663	\$32,112	#DIV/0!	\$154,811				

- 45) You'll notice that we didn't include severances. For this column, it's better to simply include the cell range containing the relatively few values for employees who got severances.
- 46) You'll also notice that we obtained an error message in column I. For the purposes of this exercise, just leave it.
- 47) Now we have the averages, which can be used for comparisons. For instance, let's take the non-cash benefits, as we did in class. Divide the top cash benefit

Council earned a non-cash benefit that was **3.6 times** higher than

the average.

	A	D	L	U	E	r	U	п
\	. Ministry	Year	PositionTitle	PositionClass	BaseSalary C	ashBenefits	NonCashBenefits	Total Benefi
55)	Executive Council	2013	DM, Executive Council	Senior Official	\$342,631	\$0	\$107,456	\$107

56) Let's stop right here. In the second part of the tutorial, we'll create a pivot table to help us see more trends that would lead to stories.
